US Citizen in Seattle, WA

Education

- B.S. in Computer Science from Gonzaga University in WA GPA: 3.5 | May 2028
- Active Member of ColorStack and National Society of Black Engineers (NSBE)

Work History

Computer Science Teaching Assistant at Gonzaga University, WA *Aug 2026 to Current*

- Taught students how to write and debug Python code using Object-Oriented Programming (OOP) and the Linux terminal to increase project grades.
- Worked with the course professor, applying weekly feedback from code reviews to improve grading rubrics and help students fix bugs.

AI Research Assistant at University of Hawaii Hilo, HI *Jun 2026 to Jul 2026*

- Engineered a web code editor with Flask, JavaScript, HTML, CSS, and REST APIs to log coding activity and track accepted AI suggestions.
- Collaborated with engineers in an Agile workflow using Git, CI/CD, Linux, and Docker, acting on supervisor code reviews to improve suggestion filtering.
- Developed a Python AI coding assistant using OpenAI, Claude, and Llama APIs with OOP to filter noisy suggestions so developers code faster.

Projects

Yenesow

- Shipped an AI iOS mobile app to the Apple App Store using TypeScript and React Native to help users stay connected with friends.
- Built Node.js REST APIs with PostgreSQL, SQL, and AWS Bedrock AI to track contact history and generate personal outreach prompts.
- Deployed cloud backend services on AWS ECS with teammates using Git, CI/CD, and Docker, fixing production bugs reported by early users.

Jan's Line

- Built a web app with React, Next.js, Python, and Django to calculate live bar wait times from crowdsourced student check-ins.
- Created a mobile web interface with TypeScript, JavaScript, HTML, and Tailwind CSS, working with student testers to make wait-time updates clearer.
- Configured REST API endpoints and a PostgreSQL database on Amazon RDS (AWS), using SQL checks to block false wait reports and PyTest to test edge cases.
